An educational case discussion evening for primary care practitioners who see hepatitis B and C patients in Perth or for clinicians who simply would like to learn more about chronic hepatitis B and C through case studies. The evening will give practitioners an opportunity to network with a specialist and peers and delve into real-world chronic hepatitis B and C case scenarios.

Attendees will also hear about ASHM’s Viral hepatitis mentoring program in WA and have the opportunity to sign up to the program.

GP Registrars, Sexual Health Physicians, Infectious Disease Physicians, Gastroenterologists and Hepatologists are welcomed to attend to also hear about the program. Preferences for attendance will be given to GPs and Practitioners in primary care settings.

The viral hepatitis case discussion evening will be facilitated by Dr Adam Doyle from Royal Perth Hospital.

A range of case studies will be discussed that will focus on continued monitoring of patients and considerations for starting a patient on treatment for hepatitis B and hepatitis C.

At the end of this session, participants will be able to:

- Screen at-risk patients, accurately diagnose a viral hepatitis infection, perform baseline workup post diagnosis and assess for evidence of liver damage
- Understand treatment options, duration of therapy and definitions of response
- Understand risk factors, clinical signs, symptoms and complications of advanced liver disease and appropriate referral pathways
