

Physical Security Including Intruder Alarms

This module will outline the range of physical and electronic protections available to householders and businesses.

The range of physical security and electronic security options available to prospective purchasers is very wide. As a result, to the non-expert, identifying an appropriate device can be a daunting prospect: two locks can often look very similar, but in fact be very different in terms of their security, quality and general reliability. Similarly, the individual components forming an alarm system can vary in quality and impact the overall grading achieved.

Content

Some of the issues to be considered are around the following topics:

- Door security including padlocks
- Window security – types and locking devices
- External physical security – gates, walls and fences
- Key and Computer security
- The elements of an intruder alarm
- Changes in the ACPO policy and what it means for Police response
- Common signalling methods
- What do EN50131, PD662 and DD243 mean?
- What is 'confirmation technology'?

Objectives

Attendees will be able to:

- Show an understanding of the various physical and electronic security and transfer this knowledge directly to their clients.

Delivered by
Sterling's Technical Team

Who would benefit from attending?

- Suitable for Account Executives and Managers who advise clients about Commercial and High Net Worth property insurances.

Insurer Training Programme of the Year
